Name : Master RISHIT PATIL
Lab No. : 396356662
Ref By : KORANNE HOSPITAL
Collected : 13/05/2026 9:25:00AM
Specimen Status : P

Age : 3 Years
Gender : Male
Reported : 14/5/2026 1:16:21PM
Report Status : Interim

Collected at : DR KISHORE KORANNE -KALYAN

Processed at : West Reference Laboratory, Mumbai
101 to 105, Skyline Wealth Space Building,
Khalai Village, Vidyavihar West- 400086

Test Report

CULTURE AEROBIC BLOOD, RAPID

(Conventional culture, Automated-MIC, MALDITOF-MS, KBDD)

Type of Specimen :

First interim report

No / Aerobic pyogenic organism grown till date. However sample bottle used for the test will be incubated for total of 5 days and if any growth occurs, will be updated subsequently.

Please note: Second interim report will be released on : 15/05/2026

Please note: Third interim report will be released on : 17/5/2026

**As per established guidelines, paired blood culture (M263) collection using both aerobic and anaerobic bottles is recommended to maximize pathogen recovery, improve diagnostic yield, and support accurate, timely clinical decision-making.

Patient Name: - Mast. Rishit Patil
Dr. Name: - Dr. Rahul Eklahare MB, DCH.
Date: - 13-05-26
Patient Id.: - E31752-26-05-13-4

Age: - 3 ½ yrs
Sex: - Male

USG ABDOMEN & PELVIS

Liver:

The liver is enlarged in size. The echotexture is hypoechoic. Periportal cuffing is seen in right and left lobes of liver. No evidence of focal lesion within it. The hepatic and portal veins are normal. No evidence of intrahepatic biliary dilatation.

Right lobe measures 10.5 cm
Left lobe measures 8.9 cm
Portal vein measures 4 mm

Gall Bladder:

Gall bladder is well distended. The walls are smooth and regular in outline. No evidence of calculi or mass within it.

Pancreas:

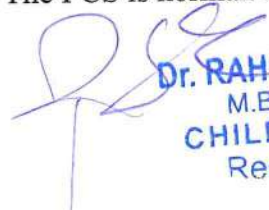

Pancreas is normal in size and reflectivity. No evidence of focal lesion within it. No evidence of intrapancreatic duct dilatation.

Kidneys:

The right kidney is normal in size, shape, position and axis. Cortical echogenicity is normal. The corticomedullary differentiation is maintained. The PCS is normal. No evidence of calculi or hydronephrosis.

The left kidney is normal in size, shape, position and axis. Cortical echogenicity is normal. The corticomedullary differentiation is maintained. The PCS is normal. No evidence of calculi or hydronephrosis.

Right kidney measures 6.6 x 2.6 cm.
Left kidney measures 6.6 x 2.7 cm

Dr. Prashant Patil

M.B.B.S., D.M.R.D. (Mumbai)
Reg. No. 87990

Spleen:

The spleen is normal in size and reflectivity. It measures 6.1 cm in its long axis. No evidence of focal lesion. The splenic vein is normal in its come and caliber.

Abdominal Lymphnodes:

No evidence of abdominal lymphadenopathy or ascites. The visualized abdominal vessels appear normal.

Urinary bladder:

The urinary bladder is well distended. The walls are regular and smooth in outline. The wall thickness is 2 mm. No evidence of calculi or mass within it.

Prevoid volume 97 cc
Postvoid residue 10 cc

Prostate:

The prostate is seen.

IMPRESSION:

In view of fever, the present transabdominal USG findings are suggestive of

- **Mild hepatomegaly.**
- **Left lower ureter is dilated and shows peristalsis. The lower ureter measures 6 mm. However, the pelvicalyceal system and upper ureter is not dilated.**
- **Mildly significant postvoid residue.**
